This Guide describes the Installation of the EUMETCast Client version 2.14.x or later on Windows Operating Systems.

Windows 7/8/10 is supported, but it also works on XP systems.

Upgrade from old 2.4.x or the 2.12.x pre-release client:

- the new client can run in parallel with older client versions

- make a clean installation following this guide

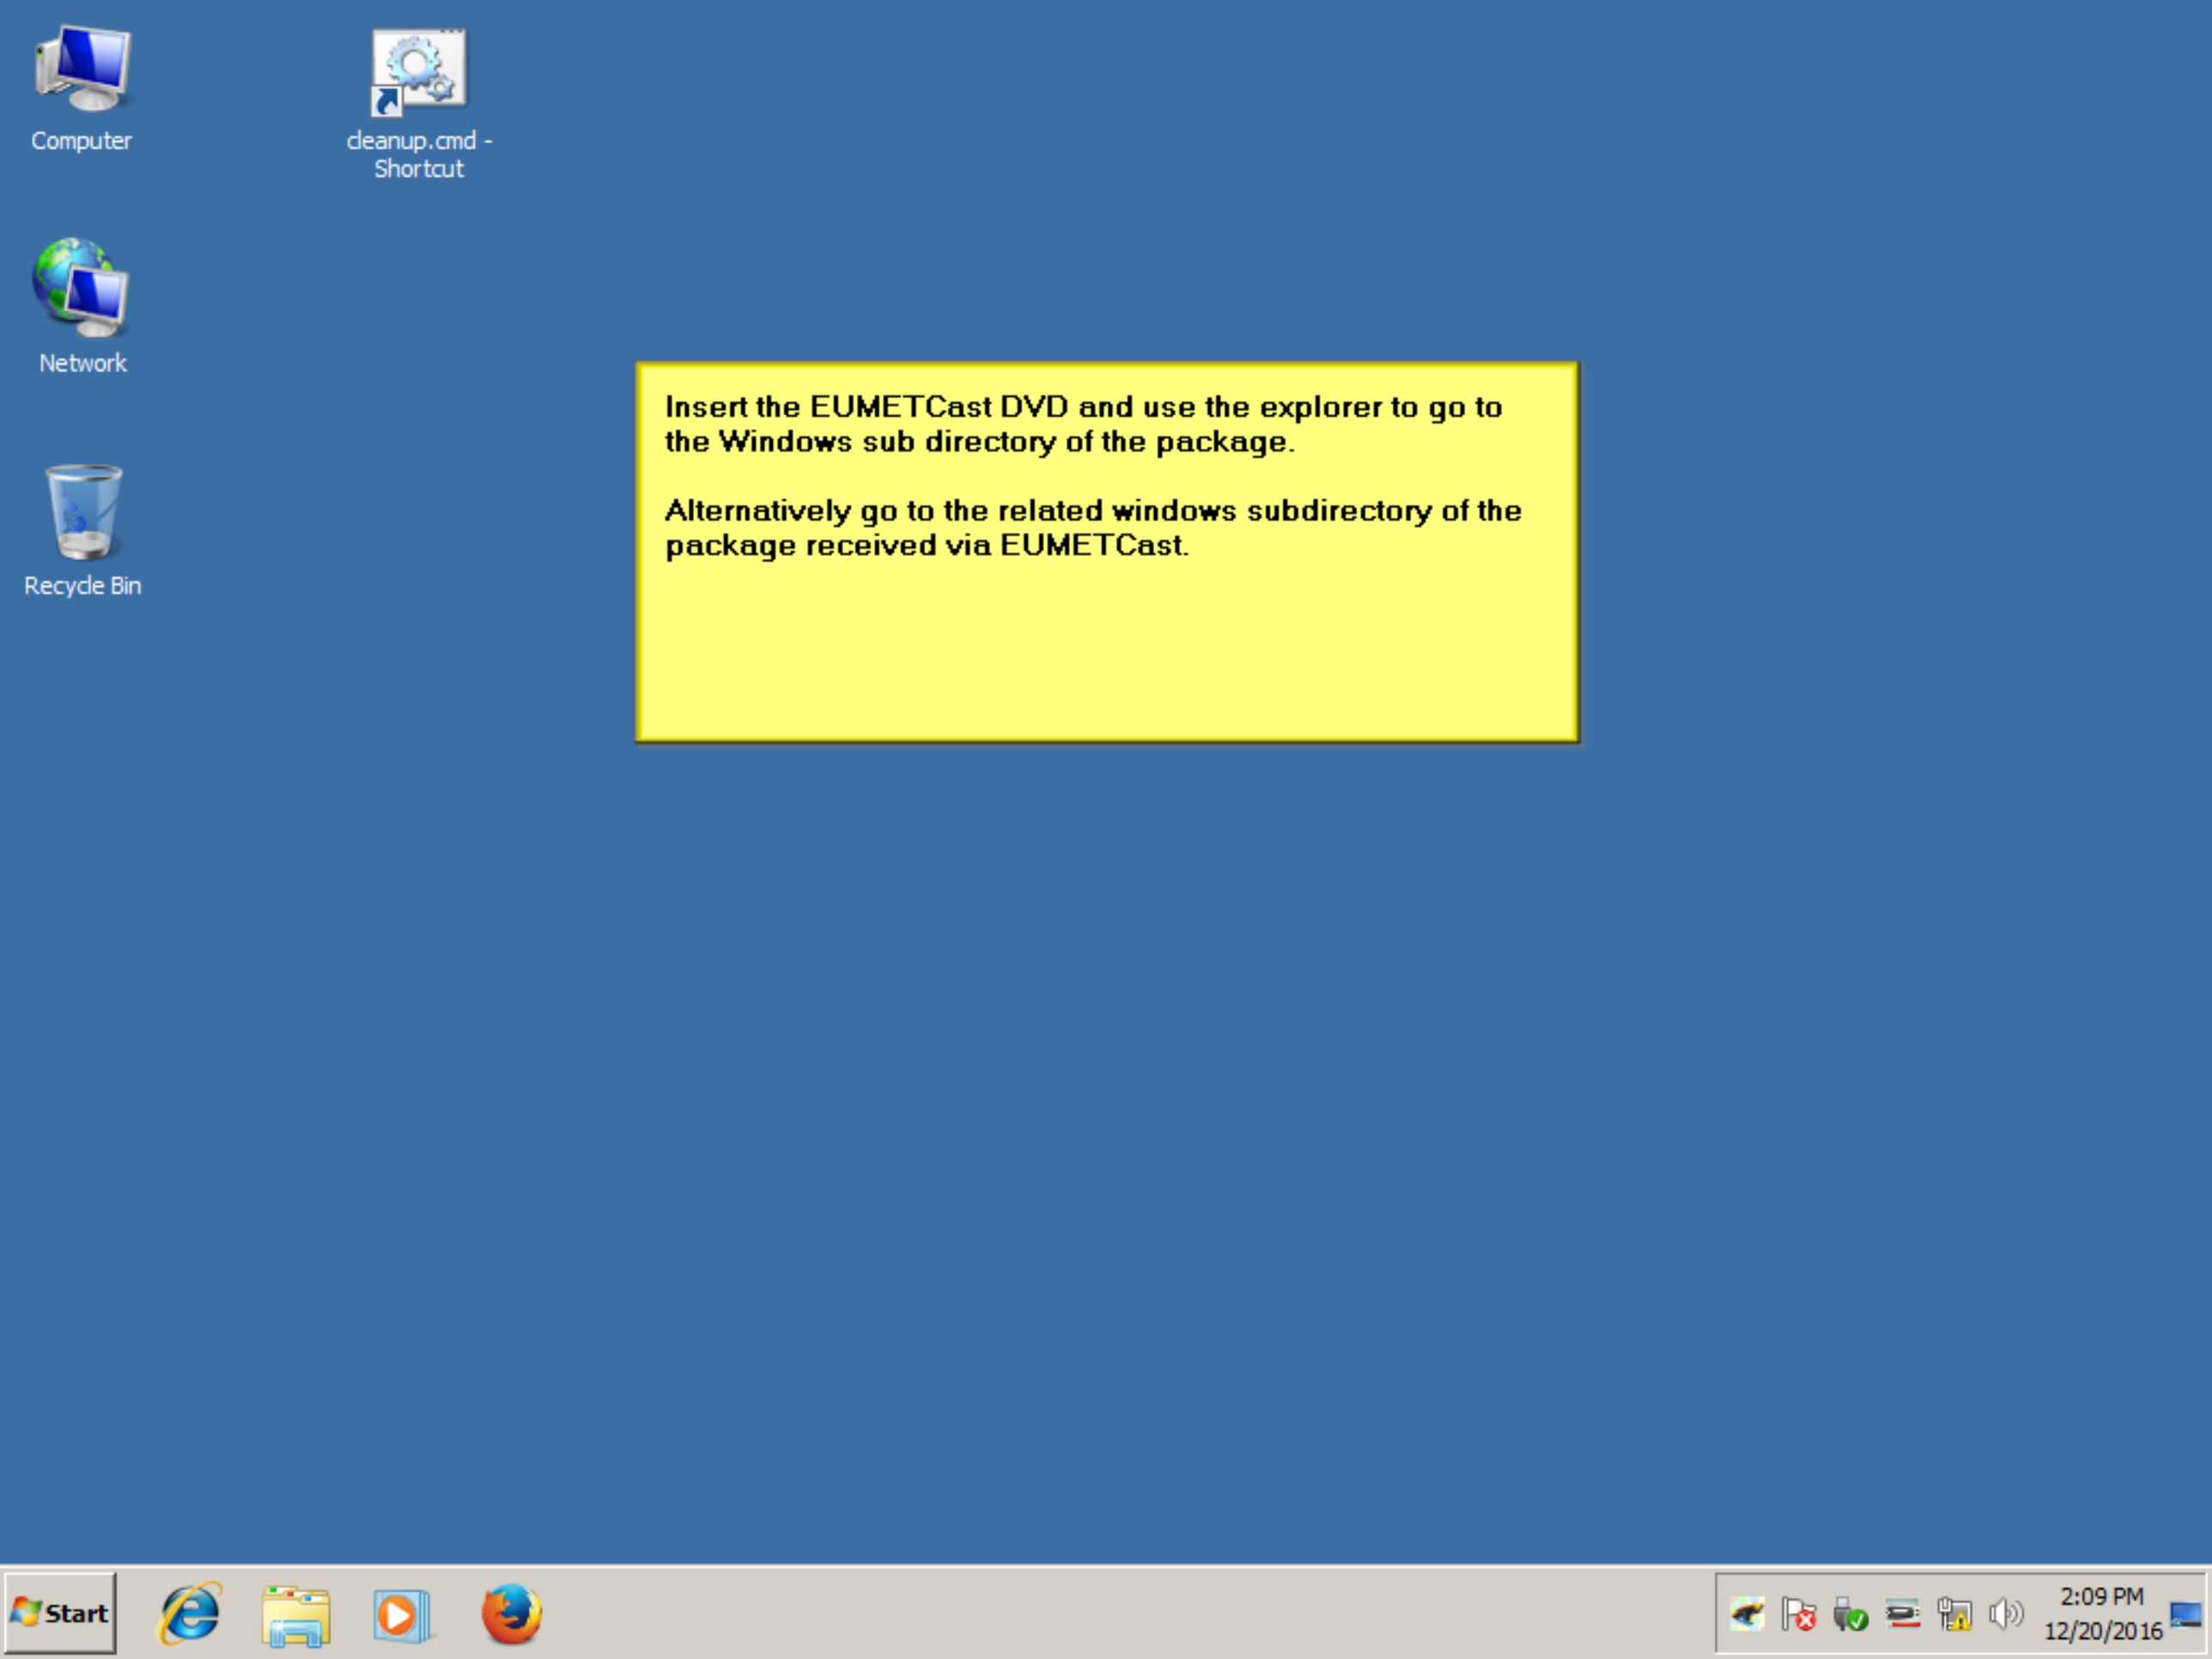
- confirm successful reception of files

- change the processing or data manager configuration
  to take the data from the new target directories

- stop the old client and uninstall it

Prerequisits for installation:

- EUMETCast multicast traffic is available at a network interface, from one of the following sources:
  - DVB router via physical network interface
  - DVB card via virtual network interface
  - from a network interface connected to GEANT network, which is enabled for EUMETCast Terrestrial traffic
- EKU software is installed
- EUMETSAT provided EKU is available
- EUMETCast username and password is available



Computer
cleanup.cmd - Shortcut
Network
Recycle Bin
Insert the EUMETCast DVD and use the explorer to go to the Windows sub directory of the package.
Alternatively go to the related windows subdirectory of the package received via EUMETCast.
Start

Help: Web Interface

This document provides help for the HTML based web interface of the TELLICAST Multicast Distribution System Client.

The web interface consists of various pages that give information about the activity of the TELLICAST Multicast Distribution System Client.
A choice between the pages can be made using the menu on the left side of the main area.

In the head of the page the following information is given independent from the page chosen for the main area:

Status: The status of the TelliCast Client which can be
ay.
arting.
utting down.
ent is not connected to the TELLICAST Multicast
em Server.
age was written to the Log File.
e was written to the Log File.
e about a false configuration was written to the Log File.

Error or warning messages are usually the result of one or more configuration problems.
The error status will not be reset automatically even if the error condition is resolved.
In case of an error or warning condition the following steps should be taken:

- Click on Log File in the menu of the web interface to open the Log File.
- Read the Log File to determine what kind of error occurred.
- Take the necessary steps to eliminate the error.
- Reset the status by clicking on the *Reset* button in the head section of the web interface. The status changes back to OK.

Host: The host on which the TelliCast Client is run.

Help pages, provides description of

Help: Operation

This document provides help for the operation of the TELLICAST Multicast Distribution System Client.

Content

- Installation
- Browser Configuration to work with the TELLICAST Client Proxy
- Key generation with tc-keys
- Configuration
- Start
- Control
- Choice of TELLICAST Channels to be Received
- FileBroadcast Reception
- DataStreams Reception
- Termination

Please note:

- Words that have to be entered are quoted here in quotation marks for a better distinction from the text. Nevertheless the words have to be written without the quotation marks.
- Pointed brackets in the description of the entries signify that the words written in the pointed brackets are not the entry itself but a description of the entry. When making the entry, exchange the description for the desired value without writing the pointed brackets. E. g. "<port number>" may result in an entry like "9201".

Help: File Formats

This document provides help for the file formats of the files necessary to operate TelliCast Client.
These files may be written and adapted to a particular situation using any standard editor. The format is similar to the Windows ini-file format. Details are given in the examples linked to this page.
For most entries there are default values so that the corresponding entries / sections can be left out. For this entries the default value is given with the description of the entry. If there is no default value given,then the entry is mandatory and an error message will be generated when it is missing.

Content

- Client Configuration File
- License File
- Client Channel File

Please note:

1. In the following the format for directories is given as used in Unix, i. e. directories separated with slashes (home/directory /file). When the Server is run on a Windows system, the slashes have to be replaced with backslashes (home\directory \file).
2. Words that have to be entered into files are quoted here in quotation marks for a better distinction from the text. Nevertheless the words have to be written into the files without the quotation marks.
3. Pointed brackets in the description of the file entries signify that the words written in the pointed brackets are not the entry itself but a description of the entry. When making the entry, exchange the description for the desired value without writing the pointed brackets. E. g. "<port number>" may result in an entry like "9201".

```
Shortcuts can be either created in a user specific startup folder
or in the startup folder used for all users of this system.
To create shortcuts in the general startup folder for all users,
the script must be run with administrator privileges.

Input which startup entries to manage:
 U - for the current user: dawbee
 A - for all users on this system
 X - Exit
Your selection: _
```

EUMETCast BAS

EUMETCast HVS-1

EUMETCast HVS-2

EUMETCast TER-1

Only if needed or advised by EUMETSAT helpdesk:

nomally there is no routing entry for multicast needed.

In some cases, e.g. on multi-homed systems (multipe network interfaces are running), a static route must be set
